01_pandas_01_2026s1: Basic Pandas

The file “scores” contains the data with two columns

1. id -> id of student
2. score -> score of student

Problems

Please write program that receives:

1. Question number from 1 to 4

And return the output based on the question number:

- For Q1, please find the shape of the data
- For Q2, please find the max score of the data
- For Q3, please find the total student that have score equal or more than 80 points
- Otherwise, just print “No Output”

Expected Results

Input	Output
Q1	(50, 2)
Q2	99
Q3	8
Q4	No Output
